

Custom Color Matching Method

BY SPRAY FINISHES

Don't worry about a limited color selection for your current spray paint project. Our seamless custom color matching method can replicate any color of your choosing. Our below guide will walk you through the electrostatic custom color matching process.

STEP 1: CHOOSE YOUR COLOR

Find a color that best suits your project needs. Choose from a physical sample of existing, any standard paint manufacturer's colors, or a wide variety of manufacturer's standard colors.

STEP 2: CHOOSE YOUR FINISH

Choose between a smooth, matte, satin, or high gloss finish. We can also match your existing metallic sample for a perfect shine.

STEP 3: SHARE YOUR SAMPLE

Share your color choice sample with your Spray Finishes representative to begin the color matching process.

STEP 4: REPLICATE THE SAMPLE

To replicate your color sample, we formulate the best combination of colored tints until we reach the perfect match of paint for your project.

STEP 5: APPLY THE PAINT

Spray Finishes applies your custom paint in an even finish, quick-drying spray paint job.
